

**THE END  
OF FEAR!**

# DAY-TO-DAY EVENTS WHICH WE MAY NOT SURVIVE

- My grandfather fell sick while out for a walk: no one knew how to call an ambulance, let alone the right ambulance service.
- Our little daughter went astray at a local mall and by the time we reached security it was too late ....
- Our dog ran away, and we can't locate it ....
- Burglars broke into our house while we were out to dinner, the alarm went off, but the thieves got away with all of our jewelry ...
- Fire broke off in our store and the wrong fire station got called ...

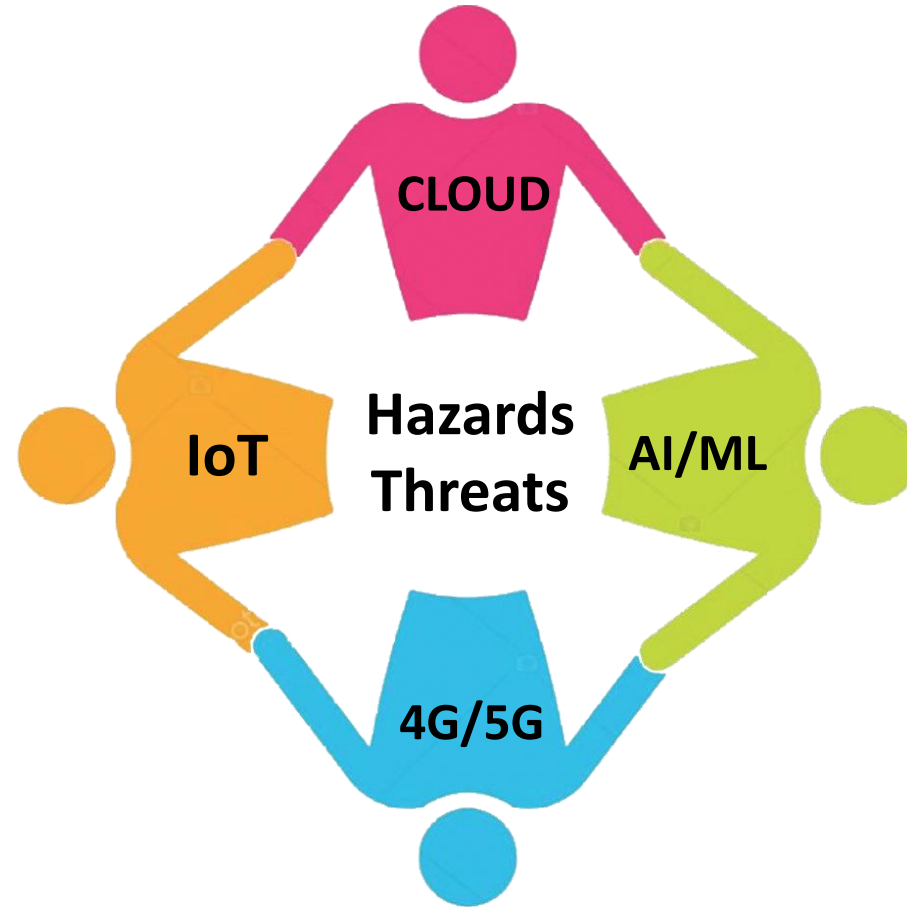

Any of these tragedies, today, should be survivable but often they are not !

# THE NEXT BIG THING AFTER **FINTECH**

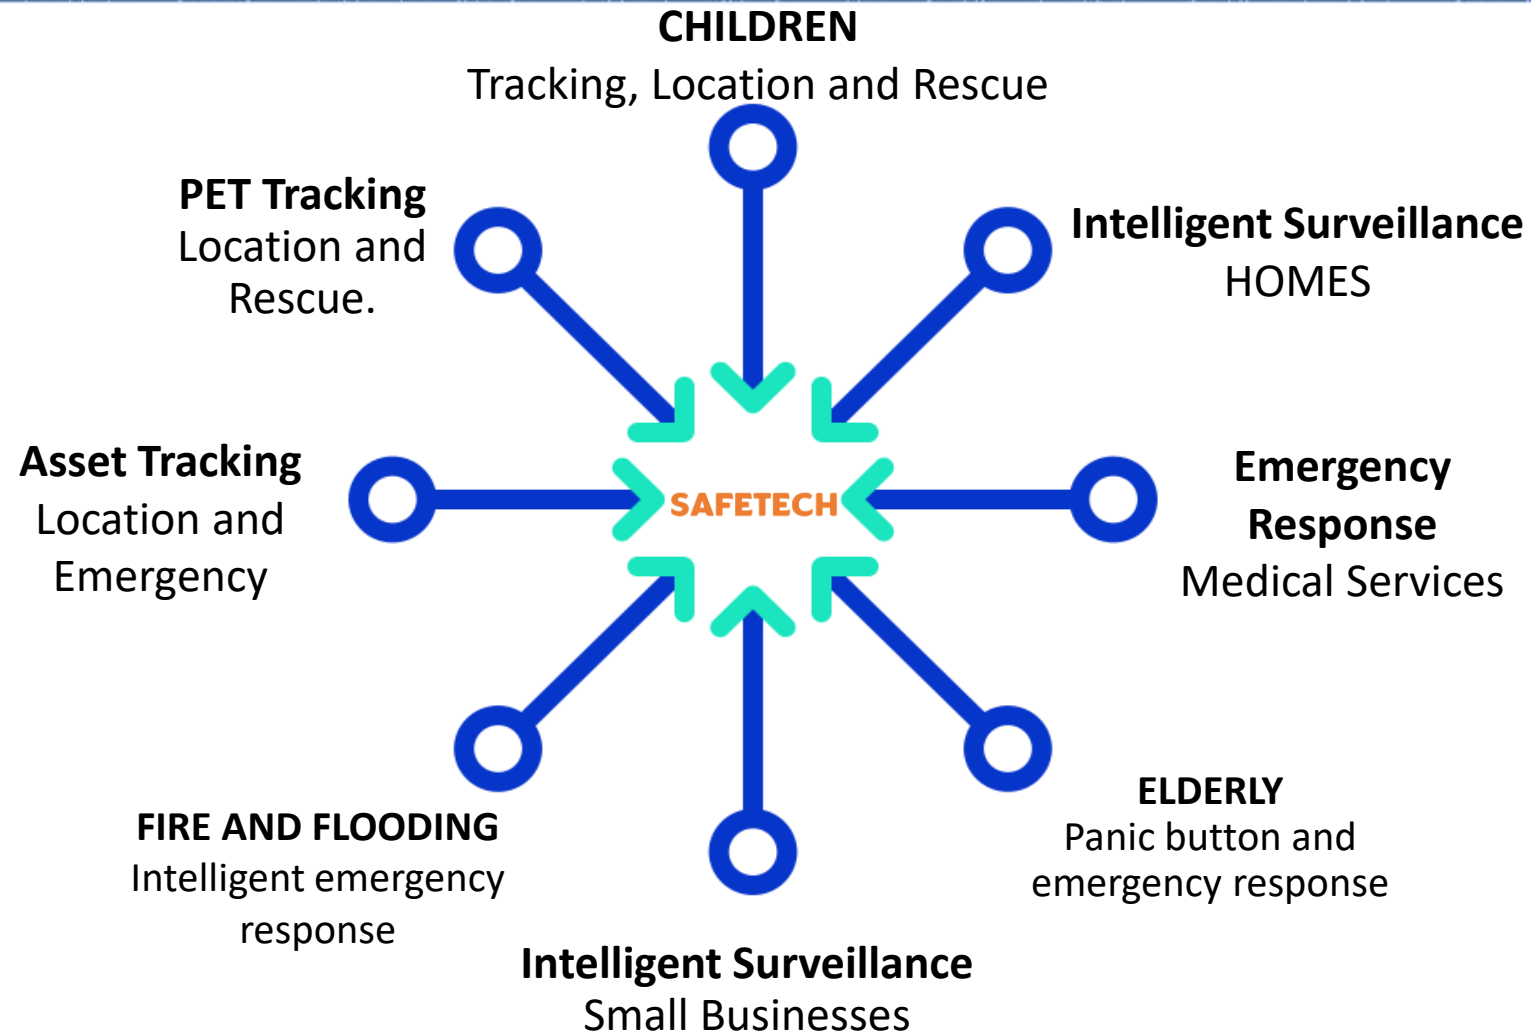

- **Money and Safety** are the two most important concerns middle class families have in their minds and hearts.
- It is not then a surprise that the application of Digital Technologies to personal finances (Fintech) **has captured the lion share of VC investment in the last 10 years.**
- However, we are convinced that the application of Digital Technologies to personal safety, **Safetech**, is the next big thing after Fintech.
- **NEVULA**, an American-Mexican startup, has developed and market-tested the first CLOUD CENTERED, IoT **Intelligent Monitoring Platform** capable helping customers manage their fears by facilitating **safety services** to help them survive life-threatening events they confront on a day-to-day basis.

THIS WILL BE A \$40 BILLION OPPORTUNITY BY 2028

# SAFETECH : DIGITAL TECHNOLOGY TO PROTECT LIVES

# SAFETECH : THE NEXT BIG THING AFTER FINTECH

# THE VALUE **NEVULA** BRINGS TO SOCIETY

- Today life-critical threats, like fires, burglaries, kidnapping, straying, health events and earthquakes are managed in an inherently low-tech, slow and critically unintelligent manner.
- Artificially Intelligent emergency dispatching services are virtually non-existent.
- Life-critical emergency services are provisioned for each customer or family as separate services by separate platforms, possibly incoherent, from different providers. This compromises safety.

NEVULA represents a CLOUD CENTERED IoT platform built so every **Safetech** app a single customer subscribes to, uses a common set of intelligence optimized for this customer.

# THE PROBLEM **NEVULA** SOLVES

- NEVULA is an IoT CLOUD CENTERED PLATFORM which improves the accuracy and speed of Emergency Management Services.
- NEVULA gathers a unique set of information for each customer which guarantees that the best Artificial Intelligence will be used to deal with any emergency event.
- NEVULA allows multiple **SafeTech** Apps and Services to coexist in a harmonious and coherent way for every customer.

**NEVULA helps people survive threatening events**

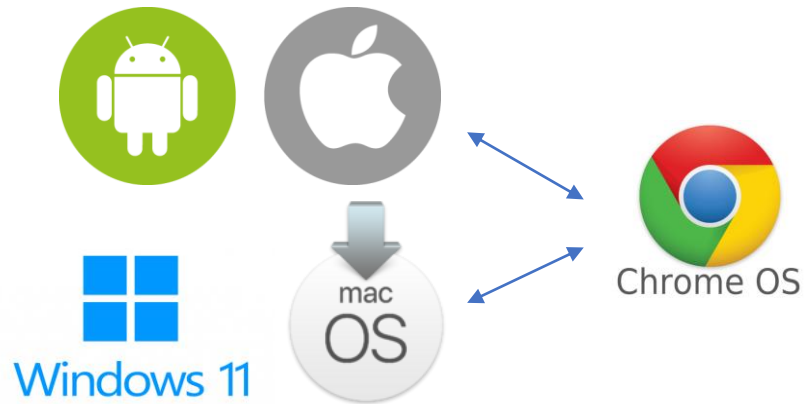

***NEVULA is the missing link in the IoT **Safetech** chain for the mass consumer market.***

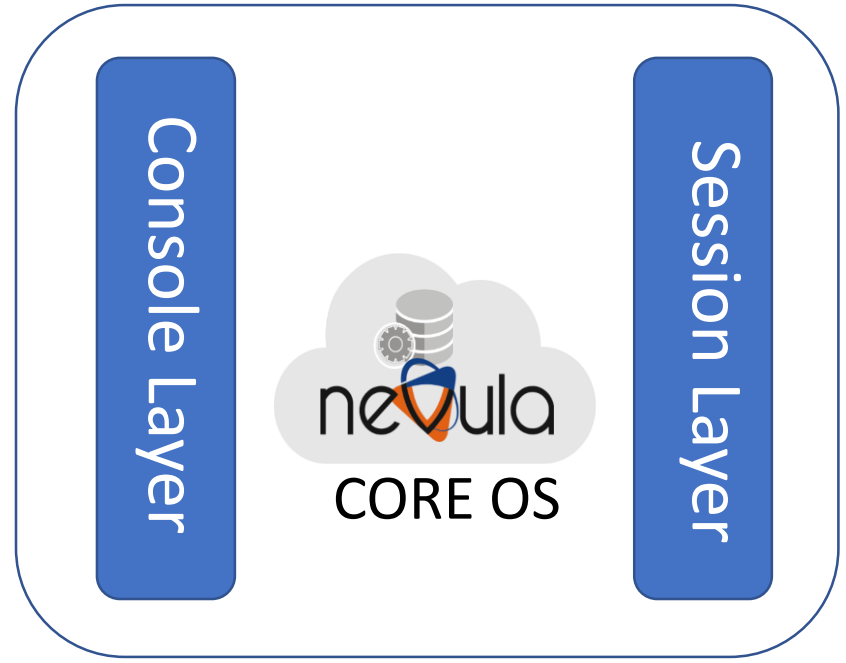

# ENABLING MASS MARKET Safetech SERVICES

## Safetech Apps

## Public Cloud

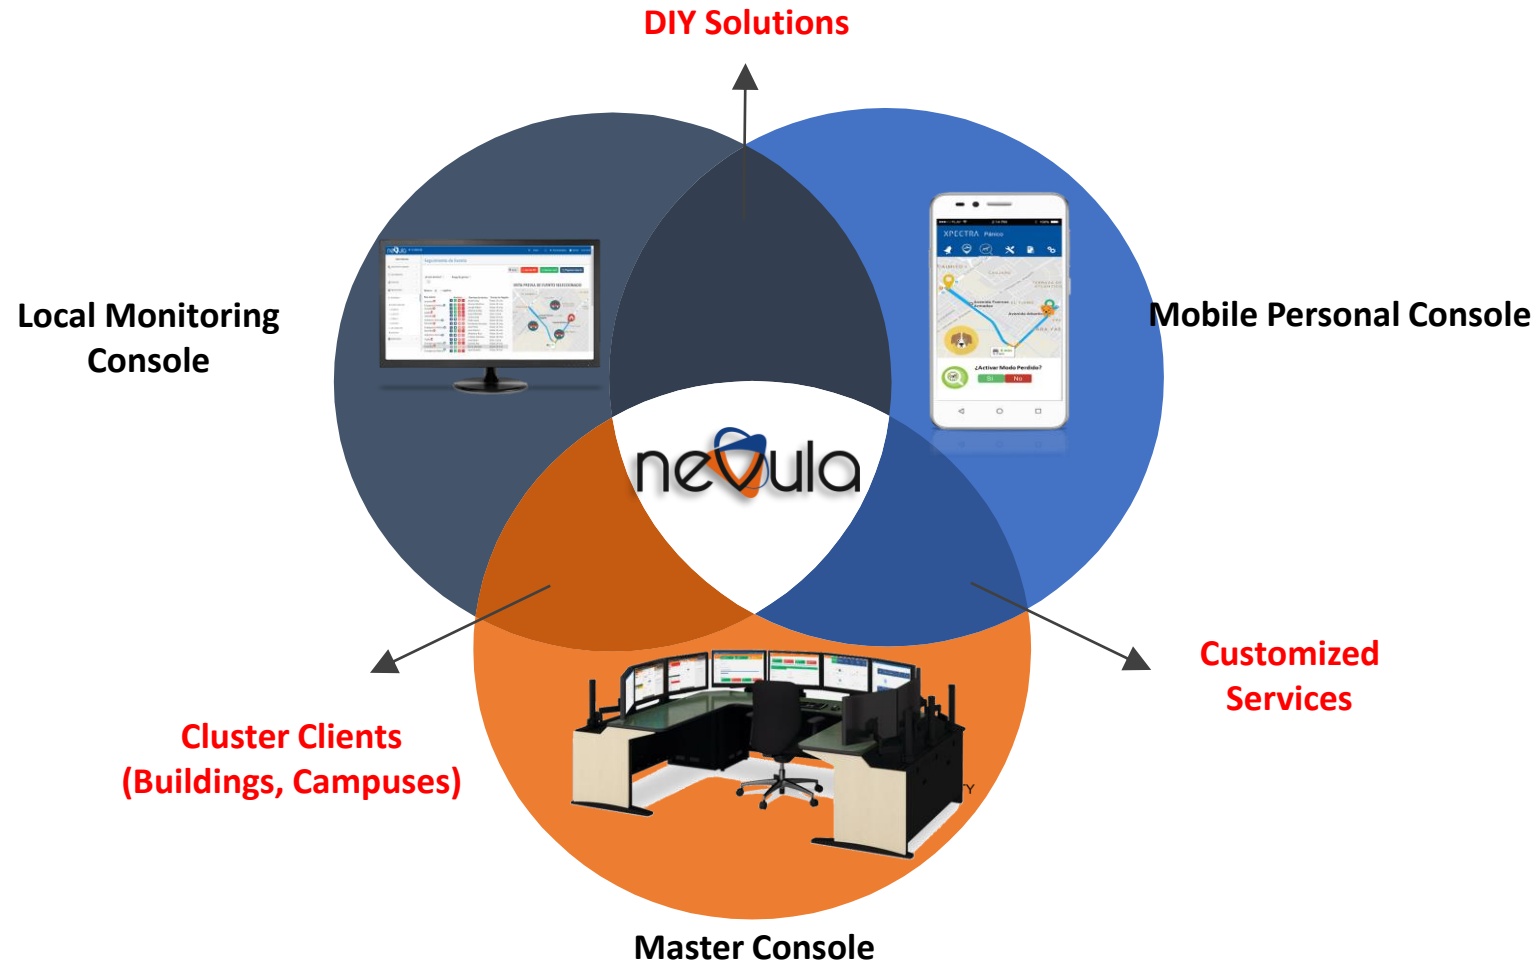

## Sensors

NEVULA uses a layered architecture which separates the connection to a specific sensor from the monitoring/control/intelligence functionality required by Safetech apps.

# CONSOLE LAYER

# WHO BENEFITS FROM NEVULA

- A. Mass Consumers** who can now enjoy peace-of-mind by subscribing to **Safetech** Services.
- B. Sensor providers** who now can sell and deploy their devices in a plug-and-play manner vis-a-vis services and applications developed by third parties.
- C. SafeTech Service Providers** who can now launch their solutions in fast, reliable and scalable mode by using NEVULA to implement the same intelligent actions for a variety of customers.
